

The effectiveness of traditional cellulite treatments has been improved by a new type of wrapping technique. The special three-dimensional structure of the innovative bandage fabric captures the concentrated lipolytic solution and the ingredients it contains, favoring their transfer to the skin. In addition, the action is intensified by infusing the extracts using device technology.

- * It reduces water retention in the tissues and visibly improves tissue structure. The legs feel light as a feather afterwards
- * It stimulates metabolism and supports the reduction of fat deposits
- * It promotes the reduction of fat deposits on the abdomen and hips and reactivates the microcirculation of the skin
- * It improves the elasticity of the connective tissue, counteracts sagging and gives firmness.

Special peeling for optimal absorption of the following products, wrapping technique, introduction of the lipolytic solution, application phase, final care.

Duration of treatment approx. 50 minutes € 78

Our recommendation:

In order to get the silhouette in shape, 3 to 4 wrapping sessions a week would be ideal. The effect is supported with the home care tailored to you.

In the presence of localized areas of stubborn cellulite, we recommend an additional intensive modeling ampoule, which is introduced with mesoporesis. Continuous use accelerates fat metabolism, optimizes mobilization and elimination of toxins and improves tissue structure. Ampoule with mesoporesis (can be booked in addition to the treatment) € 45
